

Editorial

In the current issue of June, 18 we had some new pattern of articles and some common subject articles, most of them were original articles and only one case report. We had PAP's & histopathology study of cervico vaginal spectrum of ovarian lesion, H.P. pattern of thyroid lesion and it's cytological correlation a study at rural tertiary centre, hematological values in neonatal sepsis, H.P. in abnormal uterine bleeding at tertiary hospital, H.P. in situ ca. in invasive breast ca., Hematological values in thyroid diseases, machine learning of neural network (image analysis) with DLC, South Indian study in operational link for gastritis assessment in high risk cases, thyroid epithelial malignancies at tertiary centre and a case report of reactive Angio endothelial anastomosis in the setting of a leprosy case previously undescribed. Other articles all so very good.

Rain Water is again playing havoc in extreme north and south India, cloud burst, land and mud slide in north India of Utrakhand and Himachal Pradesh, and so also in Karla with floods. Again former little bit due to manmade conditions and later due to mining a stone pelting of hills with more than 400 deaths or so all over India and losses of property and crops. Epidemics of diseases can occur if steps are not taken soon. All is manmade environmental changes with nature.
